SUMMARY

Backend engineer with 3.5 years in Go, happiest on systems problems where concurrency and failure are the hard part.

EXPERIENCE

Software Engineer, Backend Oct 2025 – Present
Nube iO *Remote*

- Designed how devices verify cloud commands (signed NATS requests, replay protection, audit log) and wrote the spec.
- Hardened device security with least-privilege access, limiting each plugin to the permissions it declares.
- Stopped WebSocket reconnect loops on slow links by coalescing updates per point so clients get the latest value.
- Fixed goroutine leaks in NATS subscriptions and made them recover on their own after upstream restarts.
- Set up Docker cross-builds for ARM and x86 pinned to an old glibc, so incompatible binaries fail at build time.

Backend Developer Apr 2023 – Sep 2025
Rara Labs *Lalitpur, Nepal*

- Scaled the Go backend of Tigg, an accounting SaaS with a database per tenant, to 1,500 businesses in Nepal.
- Built a job executor that queues scheduled bank-statement syncs for a worker pool and retries around bank rate limits.
- Wrote the PostgreSQL behind financial reports such as income statements, ledgers and statements of account.
- Secured the public API with request signatures, rate limiting and single-use nonces.
- Mentored junior developers through code review, enforcing idiomatic Go and consistent patterns across the codebase.

SKILLS

Languages: Go, Rust, Python, SQL, Bash, Lua

Data: PostgreSQL, SQLite, Redis

Messaging & APIs: NATS, REST, WebSocket, OpenAPI, JWT

Systems: Linux, systemd, Docker, nginx, GitHub Actions

EDUCATION

IOE, Pulchowk Campus, Tribhuvan University Aug 2018 – Jul 2023
B.E. in Computer Engineering *Lalitpur, Nepal*

- Final-year project: Nepali handwriting OCR (CRNN with LSTM), 86% accuracy. ([Report](#))
- Taught Python at the LOCUS fellowship and organized Yomari CodeCamp, a competitive programming contest.
